

Offices with Avi-on Controls

What has changed?

Your office lighting upgrade comes with some additional new features. The LED fixtures now in your office are dimmable and have more control.

Originally the offices were specified to have a dim level about 50% that resets each time the office is vacated. With that level still being bright for many people we have updated them to be more customizable.

New Features

Offices now include a newer motion sensor which is used to manage the occupancy of the office as well as offices that face a window also take advantage of harvesting local daylight to augment artificial light.

When you enter your office, with the lights off, it will return to the last level it was dimmed to. This will persist until you make any changes to the level using the Avi-on Scene Controller detailed below.

The Avi-on Scene controller is used to control the light level in your office and has several presets and custom controls.

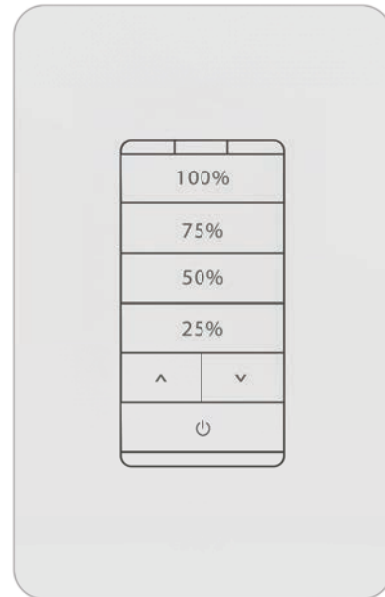

Using the controller

Once entering you can choose a preset level from the 4 buttons or use the arrows to adjust brightness. You can also select a brightness present then use the arrows to adjust the exact level.

Once you set the lights to a comfortable level the lights will always return to that level when you leave. We have also updated the sensor timeframe to 30 min. This requires some form of movement within 30 min to keep the lights on. The sensors are tuned to pick up slight movements so it should be sensitive enough to trigger motion while on the computer.

If you have any issues you can contact us at lighting@avi-on.com

Please be sure to include your office or cube location for reference

Scene Controller Buttons

Button 1 = 100% Light Output

Button 2 = 75% Light Output

Button 3 = 50% Light Output

Button 4 = 25% Light Output

Up Arrow = Raise Level by 1% per click or 5% for each second it is held

Down Arrow = Lower Level by 1% per click or 5% for each second it is held

Power Icon = Turn Off Lights
